REACT-OR

A compliance and control device used by law enforcement, prisons, correctional facilities and the military. This unique piece of equipment requires a minimal amount of training and with proper use is a true less-than-lethal option. The techniques are applied to specific muscle mass areas and nerve centres on the body and result in an immediate compliance response. It gives the user the ability to facilitate an immediate compliance response to repel, control and contain an offender or assailant. When applied correctly, the REACT-OR should not cause any permanent physical injury or damage.

Gold presentation REACT-OR given to the Dubai Police Academy

Body Concealment and Search DVD

Over recent years, people have found increasingly creative ways of infiltrating threatening items on board aircraft. Weapons, household products with minimal metal content, non-metallic items and explosives have all been carried on the body and used either to attempt a hijack or an act of sabotage.

The current reliance on metal detection technology and the likely delay in the mass deployment of advanced passenger screening technologies, such as passenger X-ray, millimetre wave imaging and portable explosive detectors, means that it remains the responsibility of the screeners to identify potentially threatening passengers. Unfortunately, when fears are aroused, the traditional 'pat down' search may not suffice. It was with this in mind that PS5 and Green Light decided to collaborate in the production of 'Body Concealment and Search'.

This DVD presentation will augment existing initiatives in the training of security personnel, and help demonstrate the relative ease with which a determined individual can secrete something on their person.

Some methodologies for the conducting of a body search are also described, yet recognising that each authority may have its own philosophy regarding this subject, the DVD keeps to general principals of search only.

Given that behavioural analysis is of critical importance to the passenger screening process, the DVD also includes a section on recognition of behavioural indicators of stress and anxiety.

Although this DVD was primarily produced for the aviation security market, its contents is equally applicable to any search environment.

Some Kind of Gun DVD

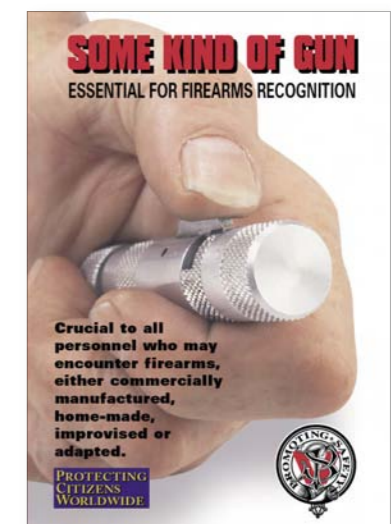

A 40-minute firearms recognition DVD video presentation made in conjunction with a major international airport, this video is an essential training programme for all professional security personnel who may encounter firearms.

9mm single shot pistol disguised as a pen

This unique DVD presentation covers all aspects of firearms including the following subjects:

- The anatomy of ammunition
- Pistols, revolvers and their component parts
- Shotguns
- Machine pistols
- Home-made and improvised guns
- Concealable firearms
- Replicas and novelty items
- The penetration power of ammunition

High Gear

High Gear™ is a state-of-the-art padded training suit with unique impact reduction properties. Weighing just 7.5 lbs. it can be used for both marking cartridge training and Defensive Tactics so trainers can fully integrate scenarios. High Gear™ reduces the risk during contact training by allowing police officers & soldiers to practice combative tactics in more realistic environments and at realistic speeds. High Gear™ will improve confidence & effectiveness during training related to extreme close quarter experiences such as arrest & control and restraint. Unlike other protective equipment, High Gear™ does not inhibit the user from full range of motion with weapons gear or empty hand techniques so when utilized by role-players, the High Gear™ user will be able to safely and intelligently replicate the actions of a true opponent.

Crown Gym Mats & NottaLine

Close quarter defensive tactics trainers throughout the world are continually striving to achieve realism in their training programmes. However, realism comes at a price and by its very nature is fraught with danger. Therefore, any training aid that creates a totally realistic and credible environment whilst at the same time achieving absolute safety is something that no defensive tactics trainer or government agency can afford to ignore. Realistic training is crucial to tactical and operational effectiveness, but we should never lose sight of the fact that the health and safety of the personnel being trained is paramount.

Using state of the art technology, Crown Gym Mats of Illinois USA have created a totally new concept in safety training aids. NOTTA LINE is a comprehensive collection of training products which have been specially designed and manufactured in vinyl and foam to replicate potentially dangerous items found in the typical home or office environment. Operationally, officers often have to function in and deal with dangerous and chaotic environments. With NOTTA LINE it is feasible to create totally safe 360 degree training rooms offering a vast variety of environmental conditions, such as the office, living room, bedroom and kitchen. In fact just about any type of furniture, equipment or urban item can be manufactured. Training rooms furnished with NOTTA LINE chairs, couches, beds, desks, filing cabinets, book shelves, computers, lamps and tables look like the real thing, and during high impact room clearance and shoot-house drills they add environmental distractions that get you closer to reality without having to hold back.

NOTTA LINE

Weapons Awareness Cases

PS5 produces a series of purpose built, heavy duty, security cases containing specially formed inserts which house a comprehensive selection of improvised, home-made, disguised and adapted weapons.

These cases can be provided to clients with a specific requirement for training in Weapons Awareness Recognition.

1. The Basic Weapons Awareness Case: is supplied to all trainers that complete this training programme through Skills for Security.

1.

2. UK Home Office Approved Training Case
This case contains examples of everyday objects which have been used to disguise and conceal weapons or illegal substances. The contents consist of a combination covering the three main generic categories of weapon design; firearms, edged weapons and impact weapons.

2.

3. Counter Terrorist and Security Search Training Case
This highly specialised training aid contains examples of Improvised Explosive Devices and their component parts. It also carries a variety of weapons that can be hidden in order to carry out practical search exercises.

3.

Weapons Concealment & Carry Wall Charts

A set of three unique, large format, colour wall charts illustrating 54 diverse and ingenious methods in which a person can carry and conceal a weapon.

Size : 420mm x 594mm (16.5" x 23.4")

Close up detail

Deep Concealment & Search Weakness Areas Wall Charts

A set of four unique, large format, colour wall charts illustrating the weakness areas of search and showing numerous ways in which a weapon can be carried in deep concealment.

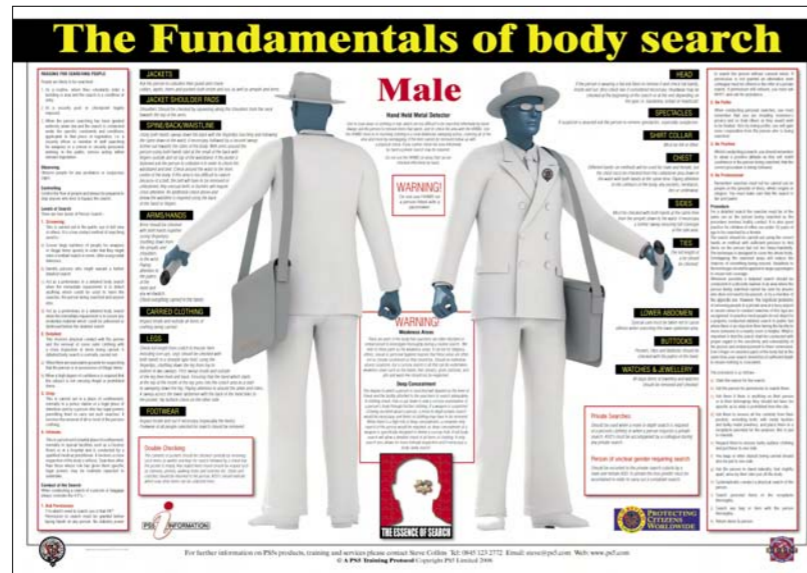

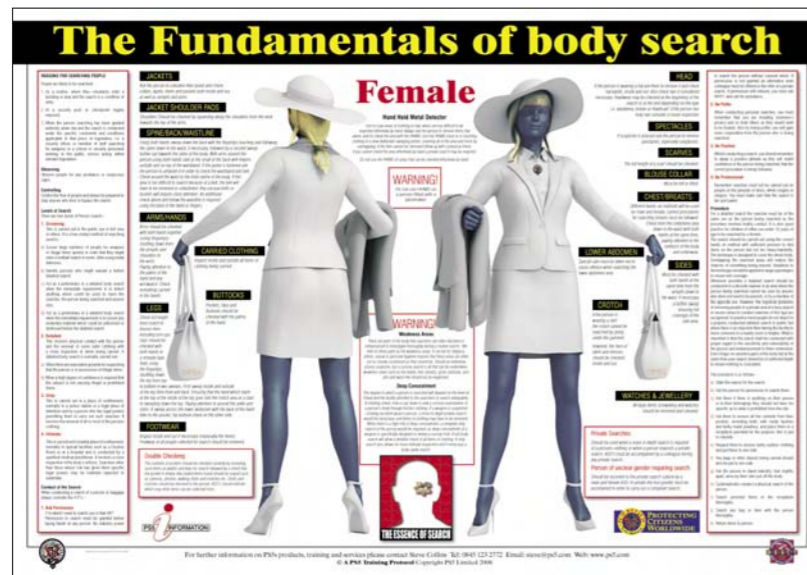

Size : 420mm x 594mm (16.5" x 23.4")

Fundamentals of Body Search Wall Charts

A set of two unique large format laminated wall charts has been specially designed in the PS5 studios. These wall charts have been produced to enhance our counter terrorist and search programmes and cover searching of males and females.

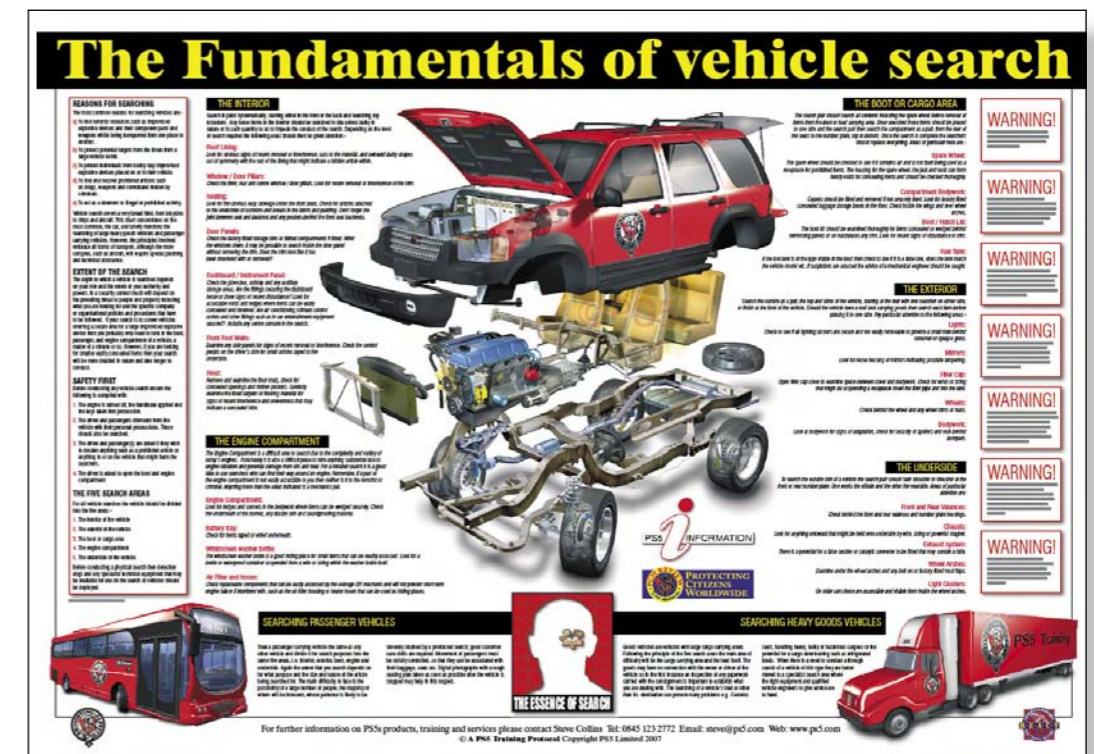

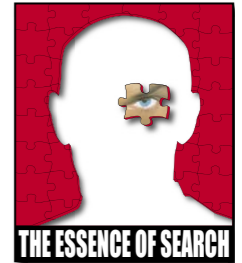

Size : 420mm x 594mm (16.5" x 23.4")

Fundamentals of Vehicle Search Wall Chart

This large format laminated wall chart has been specially designed in the PS5 studios. The wall chart has been produced to enhance our counter-terrorist and security search training programmes and covers searching of cars, large heavy goods vehicles and passenger carrying vehicles.

Size : 420mm x 594mm (16.5" x 23.4")

Crucial for all those who have a requirement to search vehicles

Threat Assessment Targets

The unique 8000 Series of Threat Assessment Targets, now in operational use with law enforcement agencies, military and special forces units worldwide, have been updated by Sykes Ltd. and PS5 Ltd. This new series of photographic threat assessment targets has been developed for realistic training scenarios.

MCQUEEN

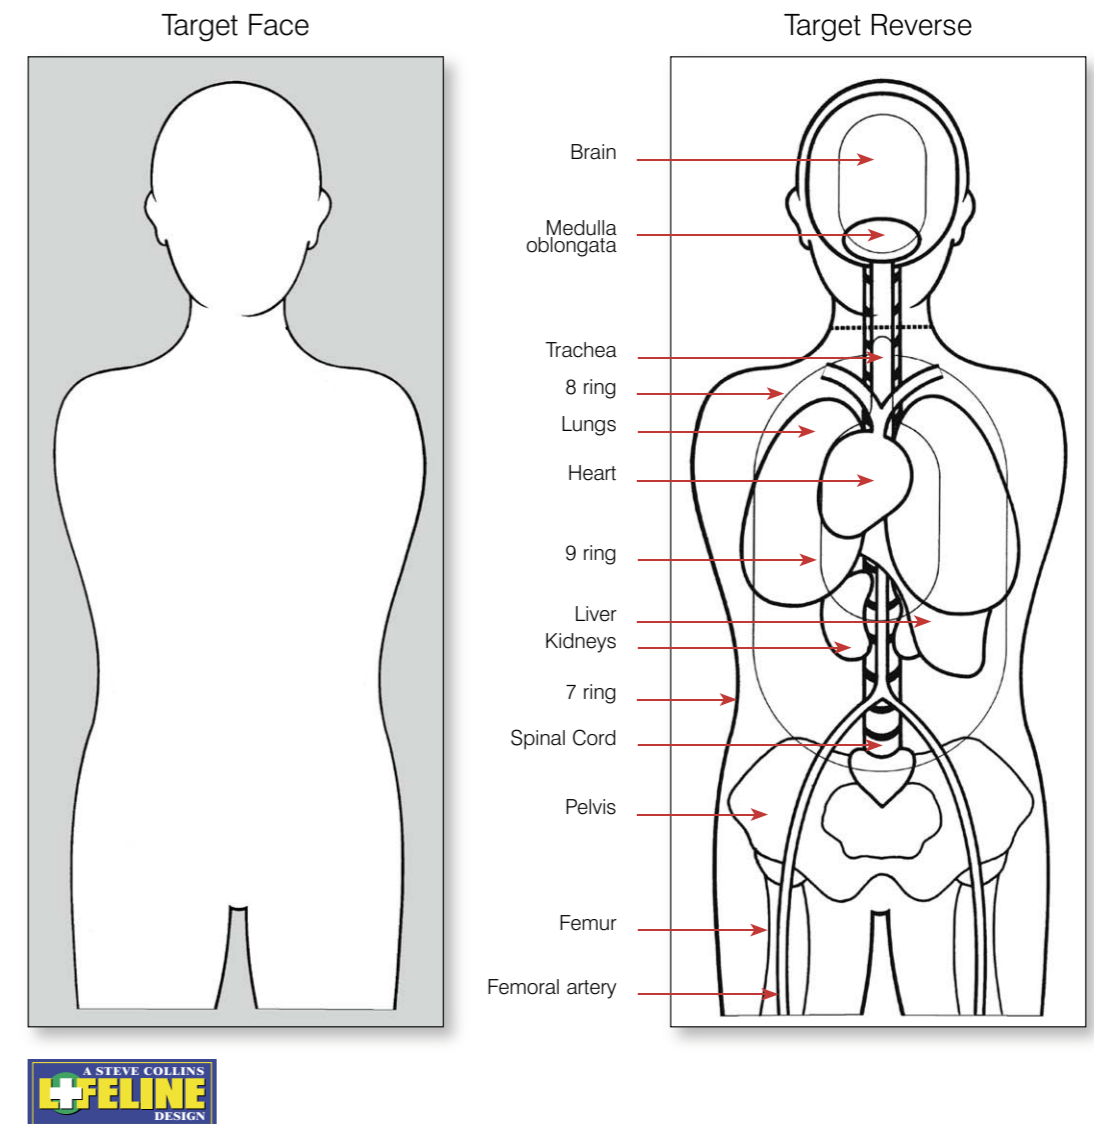

The new range comprises of several different images, most available with differing hostile and non-hostile overlay patches. Each target is printed in full colour and is ideal for anti-terrorist, siege, hostage rescue and hijack situation training. The targets are easily changed from hostile to friendly by applying the appropriate overlay. The series is designed to fit onto standard NATO backing boards - 458mm x 1143mm (18" x 45"). All targets have a printed lethal score zone and are suitable for both close quarter battle and sniper training. Transparent 21mm diameter patches are available for repairing shot holes.

13 targets available with 33 different variations (using overlay sets).

Reversible Anatomical Target

The PS5 anatomically correct reversible target. This unique target was designed with police, tactical and special forces training in mind, and is a combination of all the recognised standard target requirements plus on the reverse side a graphic representation of all major internal organs and skeletal features to enhance recognition of effective shot placement. This vital organ target is ideal for reactive training, physiology awareness and qualification. This target has been designed to fit onto standard NATO backing boards - 458mm x 1143mm (18" x 45").
